Remark:
- It is the result on total Br while test item on restricted substances in PBBs/PBDEs.
- It is the result on total Cr while test item on restricted substances is Cr(VI).
- Screening test by XRF spectroscopy. XRF screening limits in mg/kg for regulated elements according to IEC 62321-3-1:2026 Annex A.
- As requested by the applicant, test was conducted only on components listed in this report.Other components were not tested.

Note:
When Cr ($^{6+}$) in a sample is detected below the 0.10 $\mu g/cm^2$ LOQ (limit of quantification), the sample is considered to be negative for Cr ($^{6+}$). Since Cr ($^{6+}$) may not be uniformly distributed in the coating even within the same sample batch, a "grey zone" between 0.10 $\mu g/cm^2$ and 0.13 $\mu g/cm^2$ has been established as "inconclusive" to reduce inconsistent results due to unavoidable coating variations. in this case, additional testing may be necessary to confirm the presence of Cr($^{6+}$). When Cr ($^{6+}$) is detected above 0.13 $\mu g/cm^2$, the sample is considered to be positive for the presence of Cr ($^{6+}$)in the coating layer. Unavoidable coating variations may influence the determination information on storage conditions and production date of the tested sample is unavailable and thus Cr ($^{6+}$) results represent status of the sample at the time of testing
